TEAM SVAKRIT AI

ESD INNOVATION CHALLENGE 2026 · GOVERNMENT DIGITAL SERVICES

MeeSeva Saathi

Tell it what you need, in Telugu, English, Hindi or Urdu. It tells you which service, what to carry, where to go, and what every status means.

CHIRAG MAKVANA · BANSI CHIRAG MAKVANA · GITHUB.COM/CHIRAGMAKVANA/MEESEVA-SAATHI

MEESEVA TODAY

Large, heavily used, and with a visible gap between applying and getting served.

391
active services across 38 departments

5,265
MeeSeva centres in Telangana

32.5 lakh
transactions in August 2026

42 lakh
applications pending beyond their time limit since Jan 2025

92 lakh
requests rejected to date (about 4.9%)

2
portal languages: English and Telugu only

Source: MeeSeva portal statistics, ts.meeseva.telangana.gov.in, read 21 Oct 2026.

THE PROBLEM, AS A CITIZEN MEETS IT

Three questions stand between a citizen and the counter.

01 **Which service do I need?**

People describe a need: “my father passed away and we need the pension.” The portal is organised by department and expects you to know it is a death certificate, then a family-member certificate.

02 **What must I carry?**

A Telangana Police SOP records that unclear or missing documents cause delays and repeat visits. Each repeat visit is a day’s wages for a daily-wage worker.

03 **What does my status mean, and what now?**

“Under verification” and “needs documents” say nothing about the next step. Guides and RTI services exist only to answer this.

WHAT MEESEVA SAATHI DOES

A companion that prepares the citizen and informs the department.

Ask

Describe the need in your own words, by text or voice, in Telugu, English, Hindi or Urdu. Get the right service, documents, fee and time.

CITIZEN

Prepare

A document checklist per service. Tick items as you collect them; submit only when complete.

CITIZEN

Track

A plain-language explanation of every status, read aloud on request, and a notification when it changes.

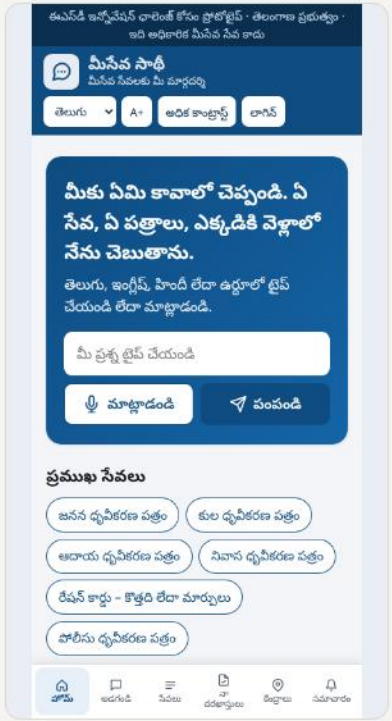

CITIZEN

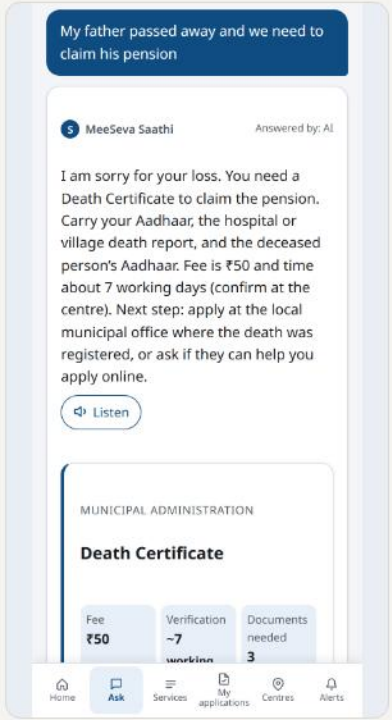

Insights

What citizens ask, what the catalogue cannot answer, and feedback tagged by sentiment and topic.

ESD WING

From a life situation to the right service, in the citizen's language.

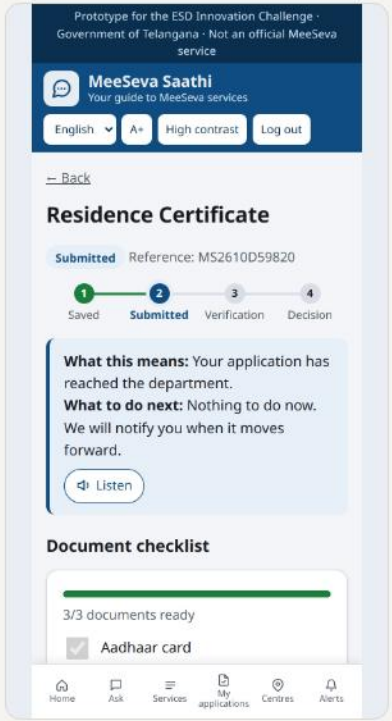

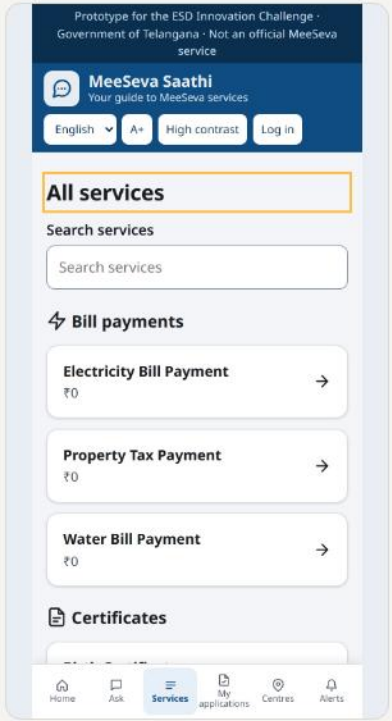

Home in Telugu: one question box, popular services, categories.

"My father passed away and we need to claim his pension" → Death Certificate, the three documents to carry, fee, time, and a pointer to the Family Member Certificate next.

Every answer carries a service card and a **Listen** button that reads it aloud.

No wasted trips: the checklist gates submission; the status explains itself.

Four-step timeline: Saved → Submitted → Verification → Decision.

What this means / what to do next, in the citizen's language, for every status. Officer remarks reach the citizen as a notification.

19 services across 6 categories, with the official MeeSeva revenue timelines (income 7 days, residence 6, caste 30).

HOW THE AI WORKS

Grounded, multilingual, and never down.

Detect

Script-based language detection: Telugu, Devanagari, Urdu or Latin, whatever the interface language.

Understand

Azure OpenAI (gpt-5-mini), grounded only in the service catalogue, with need-to-service mapping and forced JSON output.

Fall back

If the AI is unavailable or slow, a multilingual rules engine answers from the same catalogue.

Learn

Every question and rating is logged; feedback is tagged by sentiment and topic for the dashboard.

The model may not invent services, fees or timelines, must use the official names in the citizen’s language, and says “confirm at the centre”. Voice in and out use the browser’s speech engines at no cost.

TECHNOLOGY AND TESTING

Simple, open, and verifiable in ten minutes.

Backend

Python 3.12 · FastAPI · Pydantic validation · SQLAlchemy 2 · 12 tables · SQLite or PostgreSQL

AI

Azure OpenAI gpt-5-mini, grounded in the catalogue · rules engine fallback · feedback classification

Frontend

HTML, CSS, vanilla JavaScript · Noto fonts · Web Speech API · installable web app

Testing

42 pytest cases with expected and actual results · Playwright walkthrough · bugs found and fixed documented

Open repository with README, API reference, database schema, research notes and test report: **github.com/chiragmakvana/meeseva-saathi**. No secrets in the code; runs with one command.

ACCESSIBILITY · GIGW 3.0 AND WCAG 2.1 AA

Built for first-time digital users, senior citizens and persons with disabilities.

Language

Telugu, Hindi, Urdu (right-to-left) and English; voice input and read-aloud in all four.

Readable

Three text sizes, high-contrast mode, 44 px touch targets, plain-language wording.

Operable

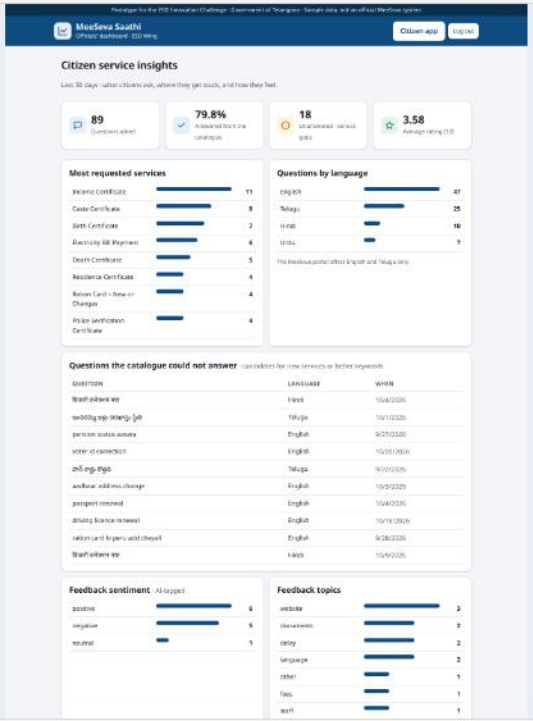

Keyboard navigation, visible focus, screen-reader labels and live announcements, reduced motion.

Light

No build step, no heavy libraries; works on a basic phone over 4G; installable as a web app.

FOR THE ESD WING

See what citizens ask, where they get stuck, and how they feel.

Most requested services and questions by language.

Service gaps: questions the catalogue could not answer (driving licence, passport, Aadhaar changes) are candidates for new services or better keywords.

Feedback tagged by AI: sentiment and topic (documents, fees, delay, website, language, staff).

Process applications with remarks; the citizen is notified in their language.

WHERE IT FITS

One assistant behind every channel the state already runs.

MeeSeva on WhatsApp

Launched November 2025 for 580+ services. Saathi is the preparation layer that can sit behind the same chat.

CHANNEL

MeeSeva portal and app

The assistant and status explainer plug into the existing portal as an API.

CHANNEL

Centre kiosks

Kiosk mode lets an operator or citizen check documents before joining the queue.

CHANNEL

API-first: FastAPI backend, 19 documented endpoints, any SQL database, deployable on the state cloud. Sample catalogue today; the ESD service master tomorrow.

What works today, and what comes next.

MVP · BUILT

01 **Multilingual AI assistant**
4 languages, text and voice, grounded answers, offline fallback

02 **Applications**
Checklist, submission gate, status timeline, notifications

03 **Catalogue and centres**
19 services, 24 document types, nearest-centre search

04 **Officials' dashboard**
Insights, service gaps, AI-tagged feedback, processing

05 **Quality**
42 automated tests, browser walkthrough, documented API and schema

NEXT

01 **ESD integration**
Official service master and live application status

02 **WhatsApp and SMS**
Deploy behind the MeeSeva WhatsApp channel; OTP via the state gateway

03 **DigiLocker**
Pre-filled forms from the citizen's documents, with consent

04 **Speech for rural Telugu**
Recognition tuned for accents; operator kiosk mode

05 **Scale**
Department dashboards, SLA tracking, accessibility audit and STQC

TEAM SVAKRIT AI

Two people, two modules, one companion.

Chirag Makvana

Research · AI assistant engine (language detection, rules engine, Azure OpenAI integration and fallback, feedback tagging) · backend APIs · login and security · database design

FOUNDER & CEO

Bansi Chirag Makvana

Citizen experience · multilingual interface · accessibility (GIGW 3.0) · document checklist and status-explainer flow · officials' dashboard · test cases and walkthrough testing

DIRECTOR

SvaKrit AI Private Limited, Hyderabad · DPIIT-recognised · NVIDIA Inception · Microsoft for Startups · AWS Activate. Built with AI-assisted development tools.

NEXT STEP

Let citizens ask in their own words.

Pilot MeeSeva Saathi with the ESD Wing on one district’s most-requested services, against the real service master, and measure first-time success and repeat visits.
