MeeSeva Saathi · team pitch script

Chirag and Bansi · 14 slides · 7.3 min of speech · aim to finish under 8 minutes

How to record

1. Open SvaKritAI_FinalPitchDeck.pptx in PowerPoint. Slide Show > Record (or Presenter View on a second screen): the notes pane shows these same words.

2. Camera on both of you if possible; otherwise record the slides with voice only. Quiet room, phone on silent, one take per slide is fine: cut on the slide changes.

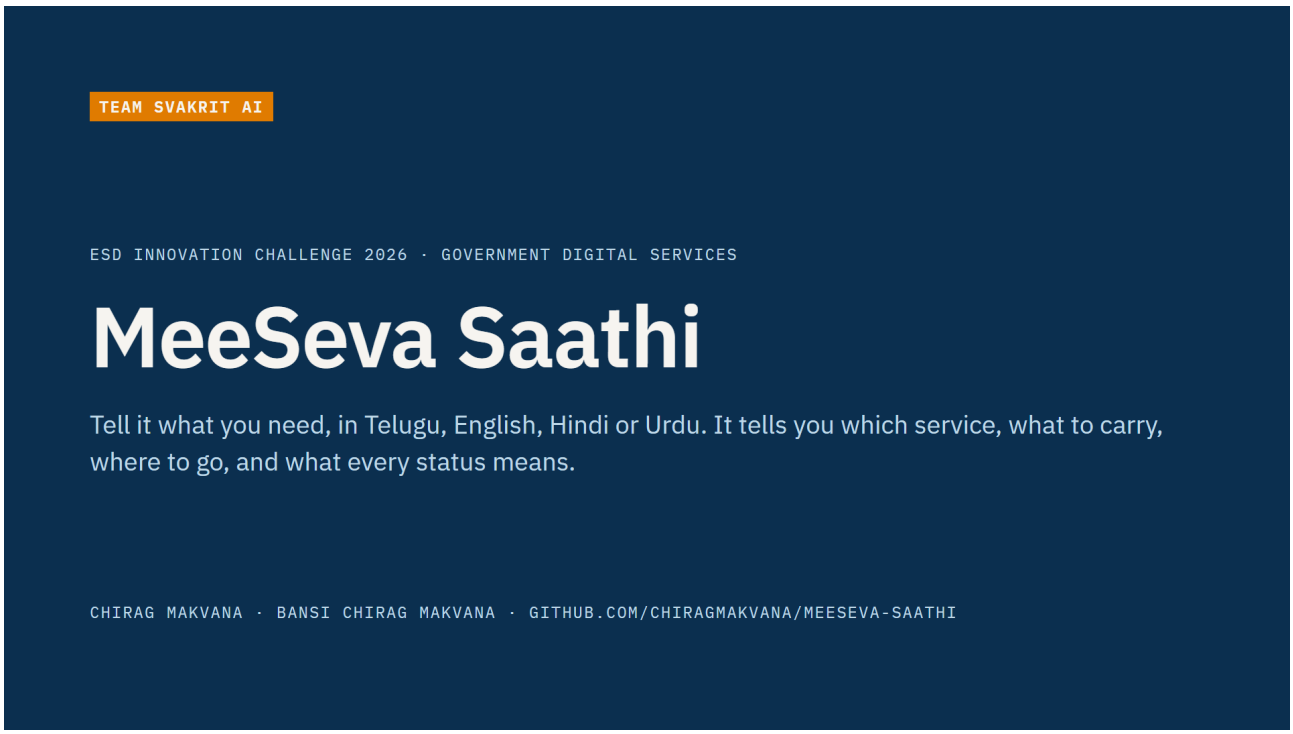

3. Each page of this document is one slide: speaker, time budget, what is on screen, and the words. Read naturally; the words are a guide, not a test.

4. Live-demo option at slide 5: switch to the running app and say the slide 5 and 6 words while doing runbook steps 1-4 and 9-11 (LIVE_DEMO_STEPS.md). Same 60 seconds; back to the deck at slide 7.

5. Export: File > Export > Create a Video (Full HD, use recorded timings and narrations). Name it SvaKritAI_TeamPitch.mp4. Export the slides to PDF as well (already provided as SvaKritAI_FinalPitchDeck.pdf).

Overview

1.	MeeSeva Saathi	Chirag	22 s	0:00
2.	MeeSeva today	Chirag	32 s	0:21
3.	Three questions stand between a citizen and the counter	Chirag	36 s	0:53
4.	A companion that prepares the citizen and informs the department	Bansi	33 s	1:29
5.	Ask Saathi	Bansi	30 s	2:02
6.	Prepare and track	Bansi	29 s	2:32
7.	How the AI works	Chirag	47 s	3:01
8.	Technology and testing	Chirag	32 s	3:48
9.	Accessibility · GIGW 3.0 and WCAG 2.1 AA	Bansi	31 s	4:19

12.	MVP and roadmap	Chirag	30 s	5:56
13.	Team SvaKrit AI	Bansi	29 s	6:26
14.	Let citizens ask in their own words	Bansi then Chirag	22 s	6:55

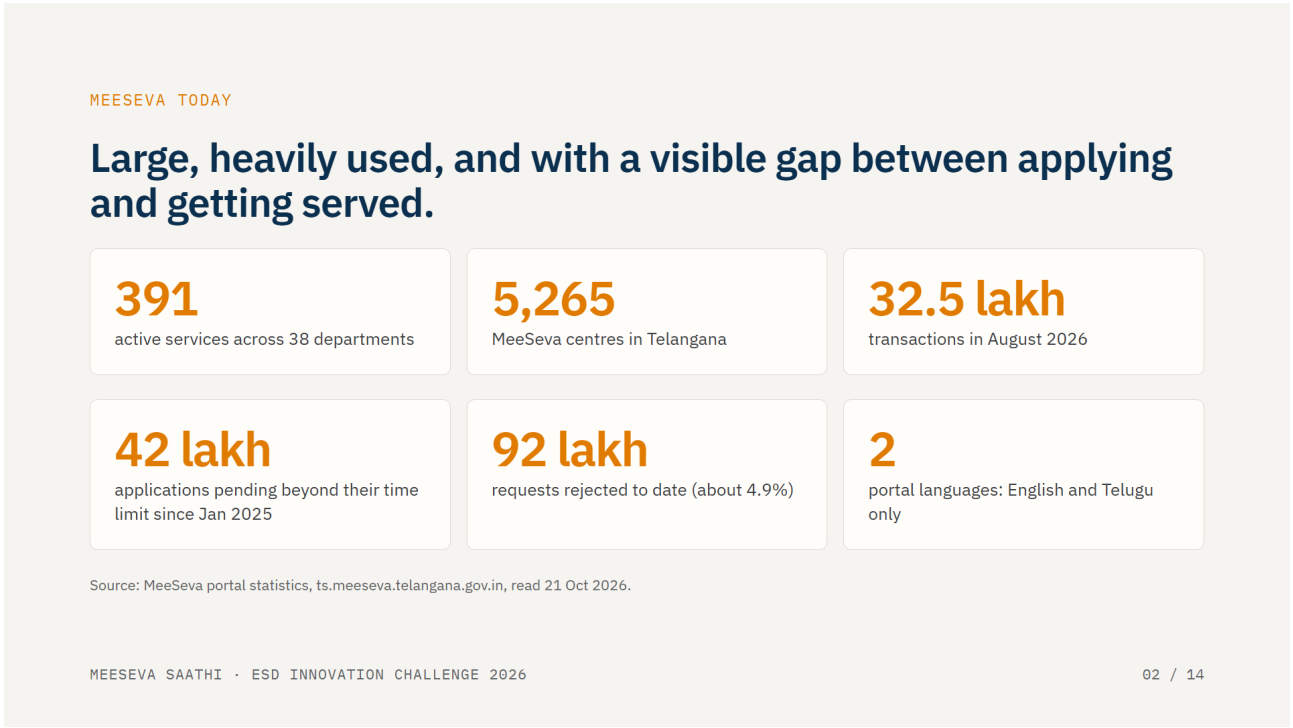

Slide 1 of 14 · MeeSeva Saathi

Chirag · about 22 s · starts near 0:00

On screen: Title, one-line promise, team names, GitHub link.

Chirag:

Namaste. I am Chirag Makvana, and with me is Bansi. We are SvaKrit AI from Hyderabad, and this is MeeSeva Saathi: a companion that helps every citizen of Telangana find, prepare for and follow MeeSeva services, in Telugu, English, Hindi or Urdu.

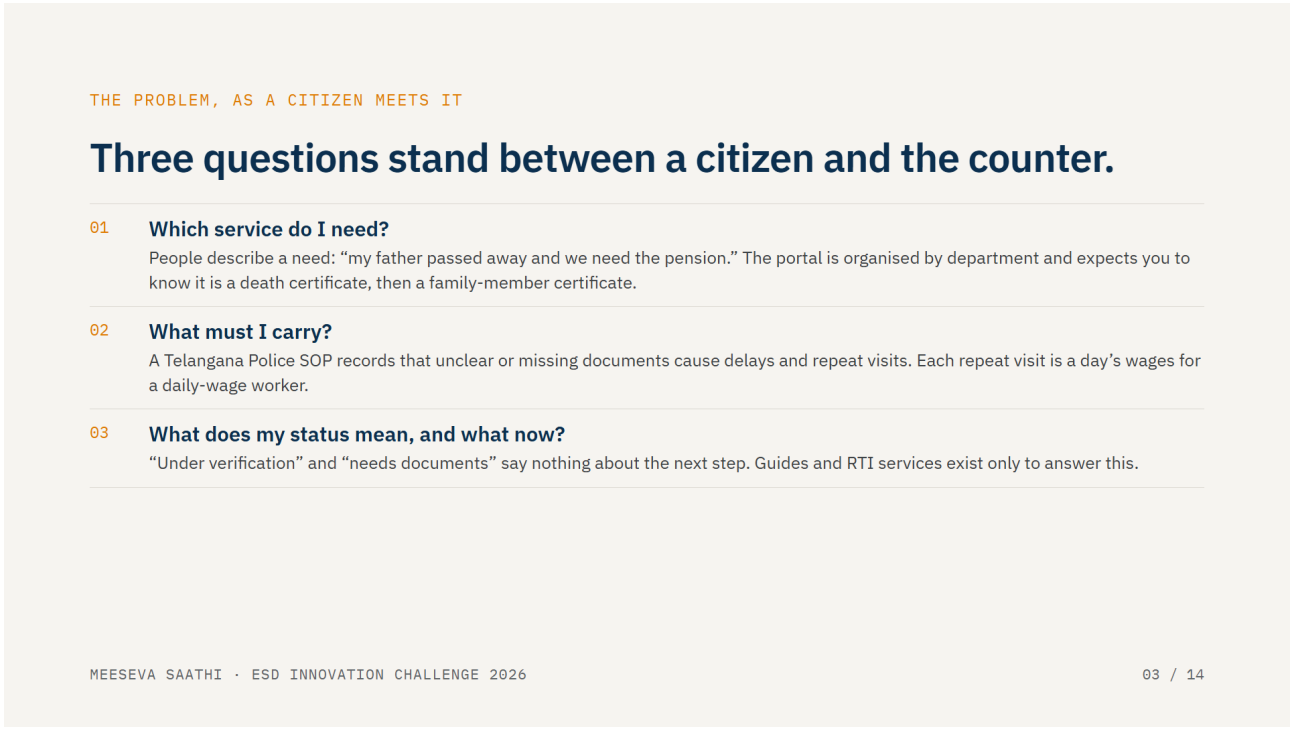

Slide 2 of 14 · MeeSeva today

Chirag · about 32 s · starts near 0:21

On screen: Six figures from the MeeSeva portal: 391 services · 5,265 centres · 32.5 lakh transactions · 42 lakh pending beyond SLA · 92 lakh rejected · 2 languages.

Chirag:

MeeSeva is one of the largest citizen service networks in the country: 391 services, 5,265 centres, and 32 lakh transactions a month. But the official portal also shows 42 lakh applications pending beyond their time limit since January 2025, and 92 lakh rejections to date. And the portal speaks only English and Telugu.

Slide 3 of 14 · Three questions stand between a citizen and the counter

Chirag · about 36 s · starts near 0:53

On screen: The three questions: which service, what to carry, what the status means.

Chirag:

Behind those numbers are three questions every citizen struggles with before reaching a counter. Which service do I need? People describe a situation, like my father passed away and we need the pension, not a certificate name. What must I carry? A police SOP records that unclear or missing documents cause delays and repeat visits. And what does my status mean? Under verification tells you nothing about the next step.

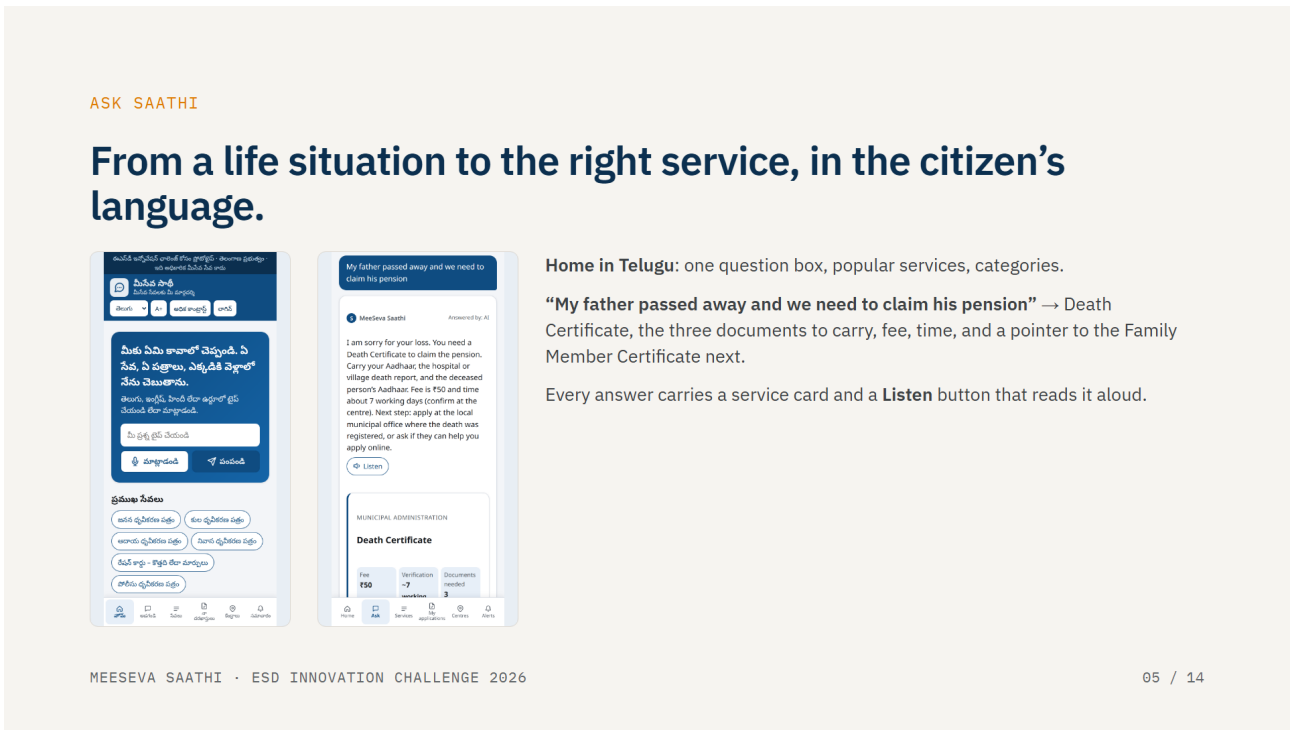

Slide 4 of 14 · A companion that prepares the citizen and informs the depart

Bansi · about 33 s · starts near 1:29

On screen: Four cards: Ask, Prepare, Track (citizen) and Insights (ESD Wing).

Bansi:

Hello, I am Bansi. Saathi answers those three questions in the citizen's own language, by typing or speaking. You describe what you need; Saathi tells you the service, the documents, the fee and the time. It keeps a checklist so you never make a second trip for a missing paper. It explains every status in plain words and tells you what to do next. And the department gets a dashboard of what citizens ask and where they get stuck.

Slide 5 of 14 · Ask Saathi

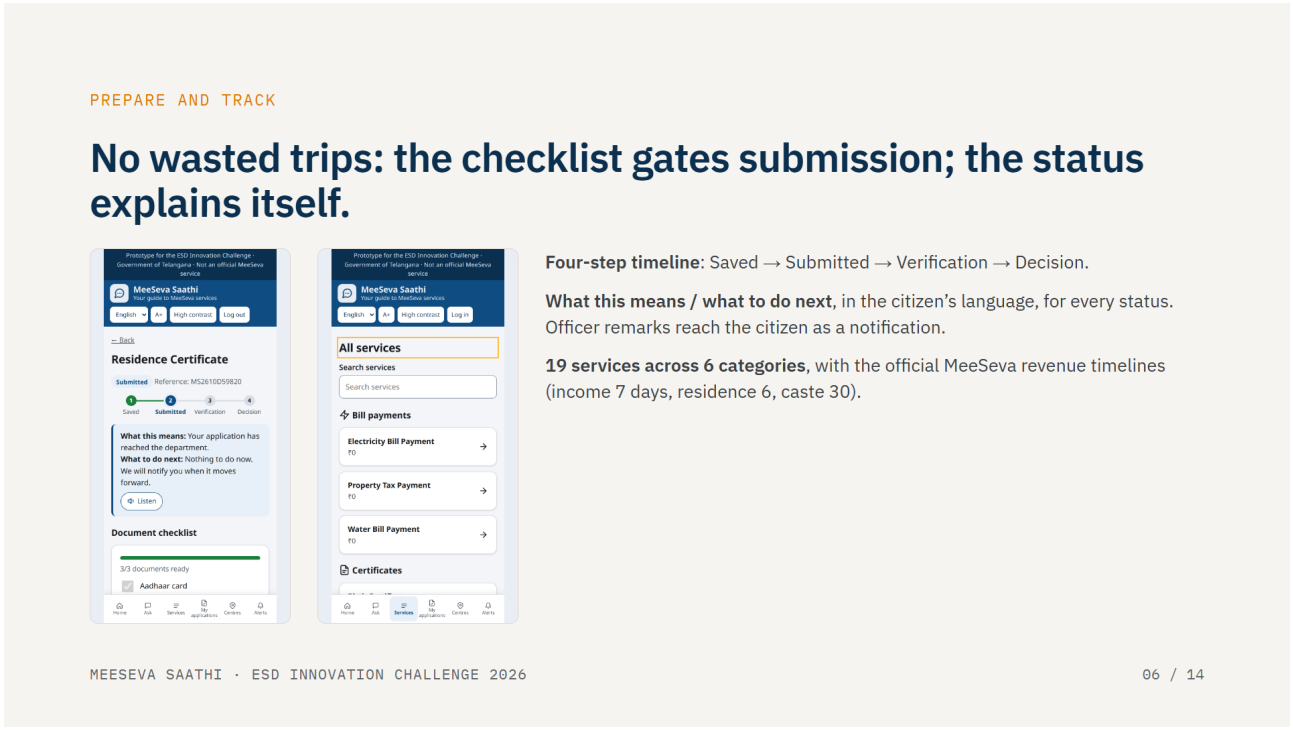

Bansi · about 30 s · starts near 2:02

On screen: Two phone screens: Telugu home; the pension question answered with the Death Certificate card.

Bansi:

Here is the app. The home screen is Telugu-first, with one question box, popular services and categories. When a citizen writes that their father passed away and they need to claim his pension, the AI replies with the death certificate, the three documents to carry, the fee and time, and points to the family member certificate that comes next. Every answer has a Listen button that reads it aloud.

Live-demo option: say these words (and slide 6's) over the running app instead of the screenshots; runbook steps 1-4 and 9-11.

Slide 6 of 14 · Prepare and track

Bansi · about 29 s · starts near 2:32

On screen: Two phone screens: submitted application with timeline and checklist; the services list.

Bansi:

Starting an application creates a document checklist. The citizen ticks each document as they collect it, and cannot submit until the list is complete. After submission, a four-step timeline shows where the application is, with what this means and what to do next in the citizen's language. The catalogue covers 19 services across six categories, with the official MeeSeva timelines.

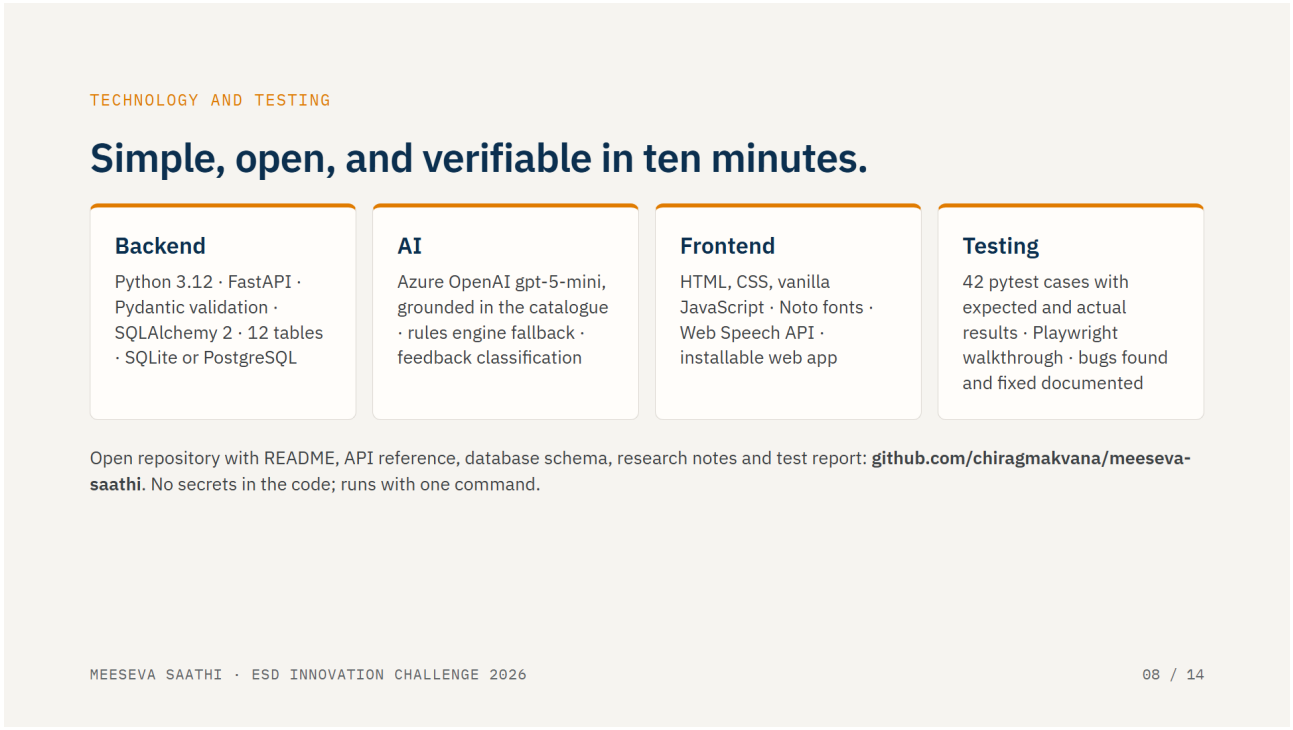

Slide 7 of 14 · How the AI works

Chirag · about 47 s · starts near 3:01

On screen: Flow: Detect → Understand → Fall back → Learn, with the grounding rules underneath.

Chirag:

I built the assistant and the backend. Every question first goes through language detection by script, so a citizen can type Telugu even when the interface is in English. Then Azure OpenAI answers, but only from our service catalogue: it may not invent services, fees or timelines, it must use the official names in the citizen's language, and it must say confirm at the centre. If the AI is slow or unavailable, a multilingual rules engine answers from the same catalogue, so the service is never down. Every question and rating is logged, and feedback is tagged by sentiment and topic.

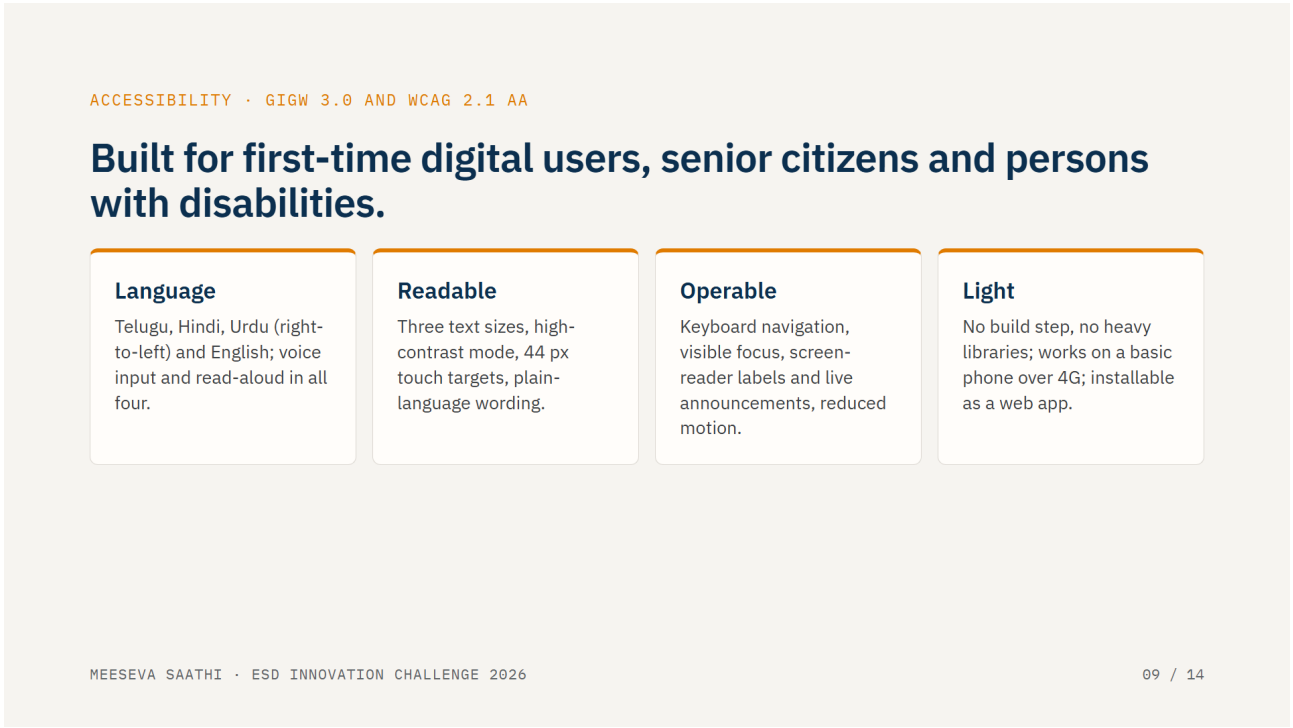

Slide 8 of 14 · Technology and testing

Chirag · about 32 s · starts near 3:48

On screen: Four cards: Backend, AI, Frontend, Testing; the repository link.

Chirag:

The backend is FastAPI with a twelve-table database: services, documents, applications with their checklists, every question asked, feedback and notifications. Login is mobile plus OTP with hashed codes and signed sessions; citizens see only their own applications, and officials have a separate role. The whole repository is open, with the research notes, the schema and the test report.

Slide 9 of 14 · Accessibility · GIGW 3.0 and WCAG 2.1 AA

Bansi · about 31 s · starts near 4:19

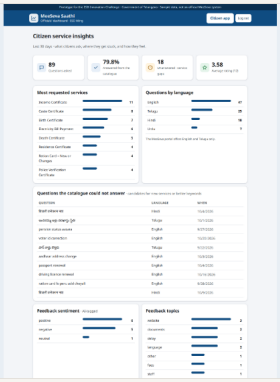

On screen: Four cards: Language, Readable, Operable, Light.

Bansi:

I built what the citizen and the officer see. The interface follows GIGW 3.0 and WCAG 2.1 double-A: Telugu, Hindi, Urdu with right-to-left layout, and English; three text sizes; a high-contrast mode; screen-reader labels; keyboard operation; large touch targets; and voice in and out for people who read little. It is light enough to work on a basic phone over 4G.

FOR THE ESD WING

See what citizens ask, where they get stuck, and how they feel.

Most requested services and questions by language.

Service gaps: questions the catalogue could not answer (driving licence, passport, Aadhaar changes) are candidates for new services or better keywords.

Feedback tagged by AI: sentiment and topic (documents, fees, delay, website, language, staff).

Process applications with remarks; the citizen is notified in their language.

MEESEVA SAATHI · ESD INNOVATION CHALLENGE 2026 10 / 14

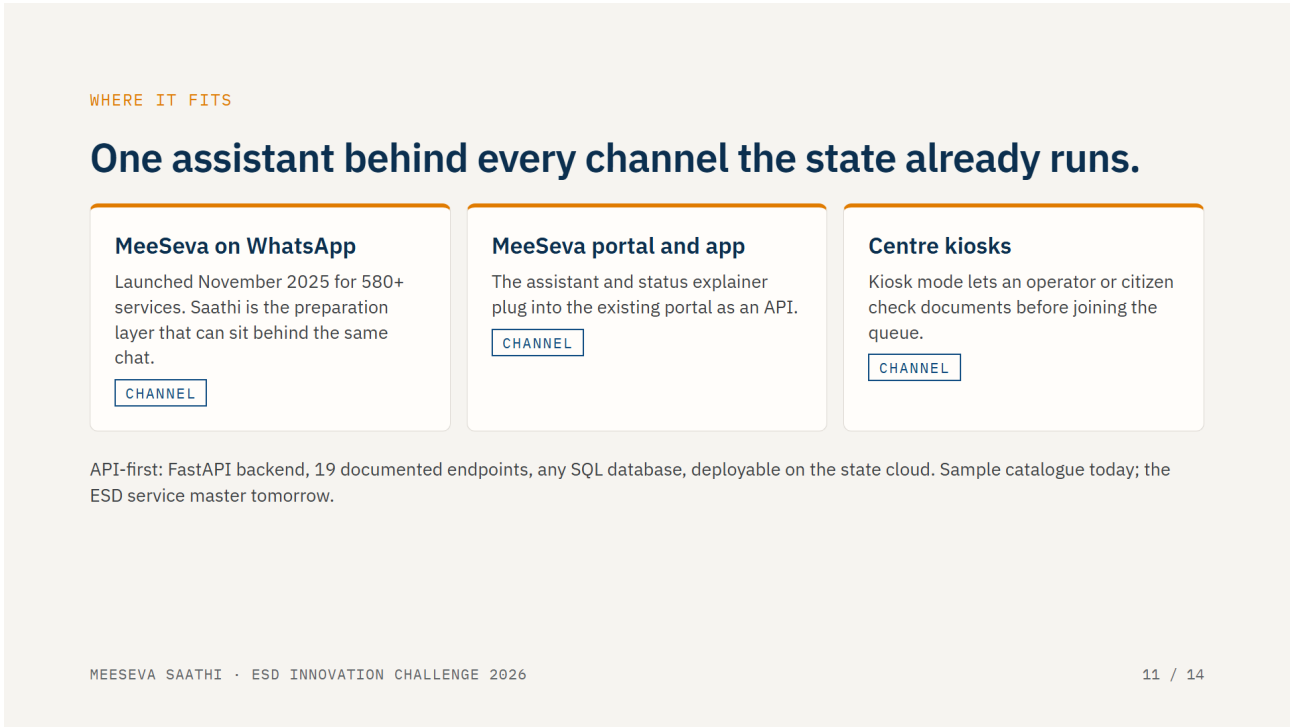

Slide 10 of 14 · For the ESD Wing

Bansi · about 32 s · starts near 4:50

On screen: Dashboard screenshot with four points: top services, service gaps, AI-tagged feedback, processing.

Bansi:

The officials' dashboard shows the most requested services, questions by language, unanswered questions as service gaps, and feedback tagged by sentiment and topic. An officer updates an application with remarks, and the citizen is notified in their language. I also wrote the 42 automated tests across login, the assistant in four languages, applications, officials and feedback, plus the browser walkthrough.

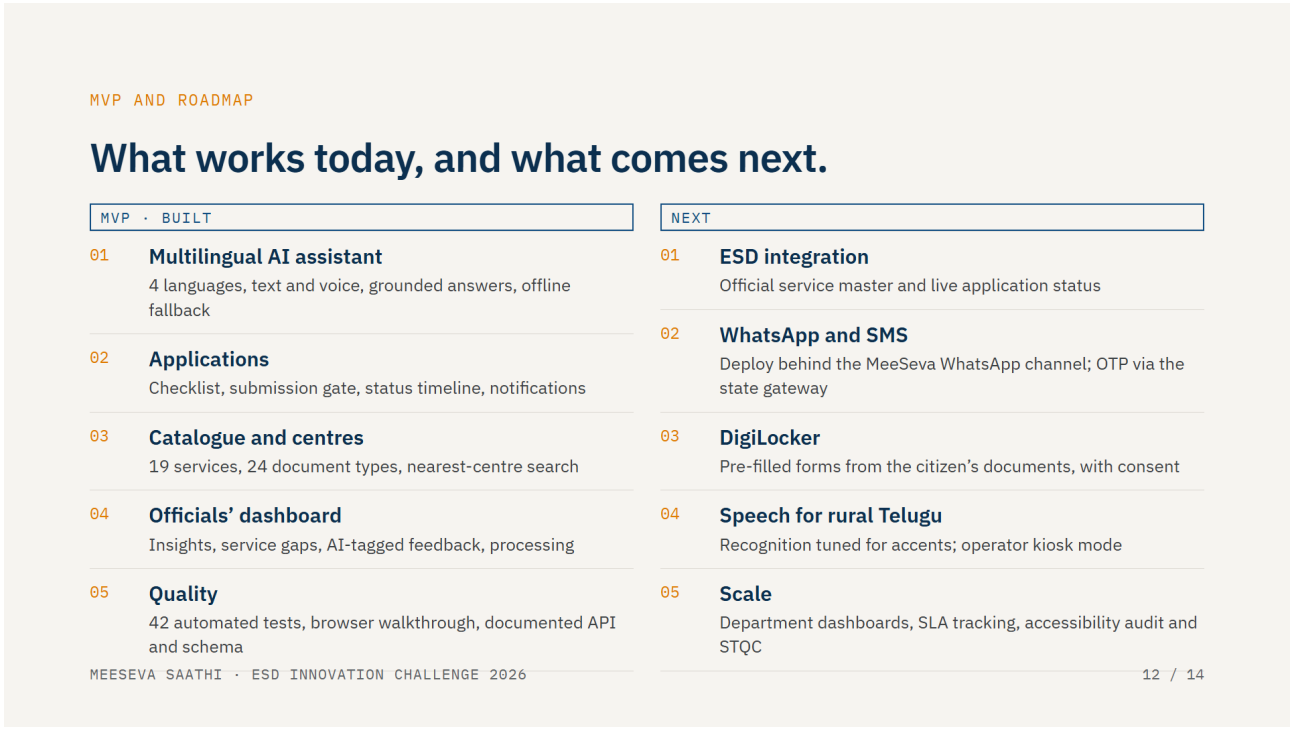

Slide 11 of 14 · Where it fits

Chirag · about 34 s · starts near 5:22

On screen: Three channel cards: MeeSeva on WhatsApp, portal and app, centre kiosks.

Chirag:

What makes Saathi different: it works before the citizen applies, not just after. It is grounded, so it never invents a fee or a document. It is the first MeeSeva experience in Hindi and Urdu. And it closes the loop with a feedback dashboard for the ESD Wing. It is API-first, so the same assistant can sit behind the MeeSeva WhatsApp channel launched last November, the portal, and centre kiosks.

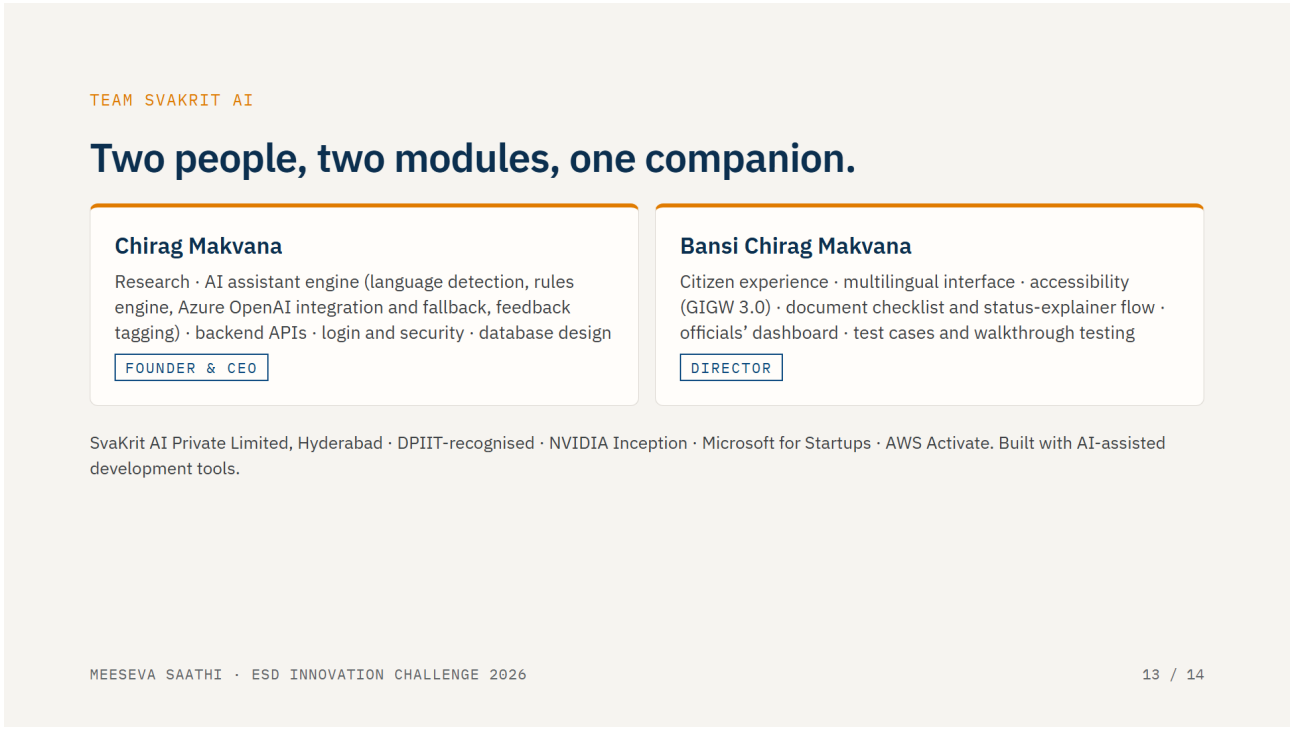

Slide 12 of 14 · MVP and roadmap

Chirag · about 30 s · starts near 5:56

On screen: Two columns: MVP built (five rows) and Next (five rows).

Chirag:

Everything on the left works today. Next, we would connect the official service master and live application status, deploy behind WhatsApp with SMS OTP, pre-fill forms from DigiLocker with consent, tune Telugu speech for rural accents, and add department dashboards. The service list, fees and centres in the prototype are sample data; the timelines follow the official revenue catalogue.

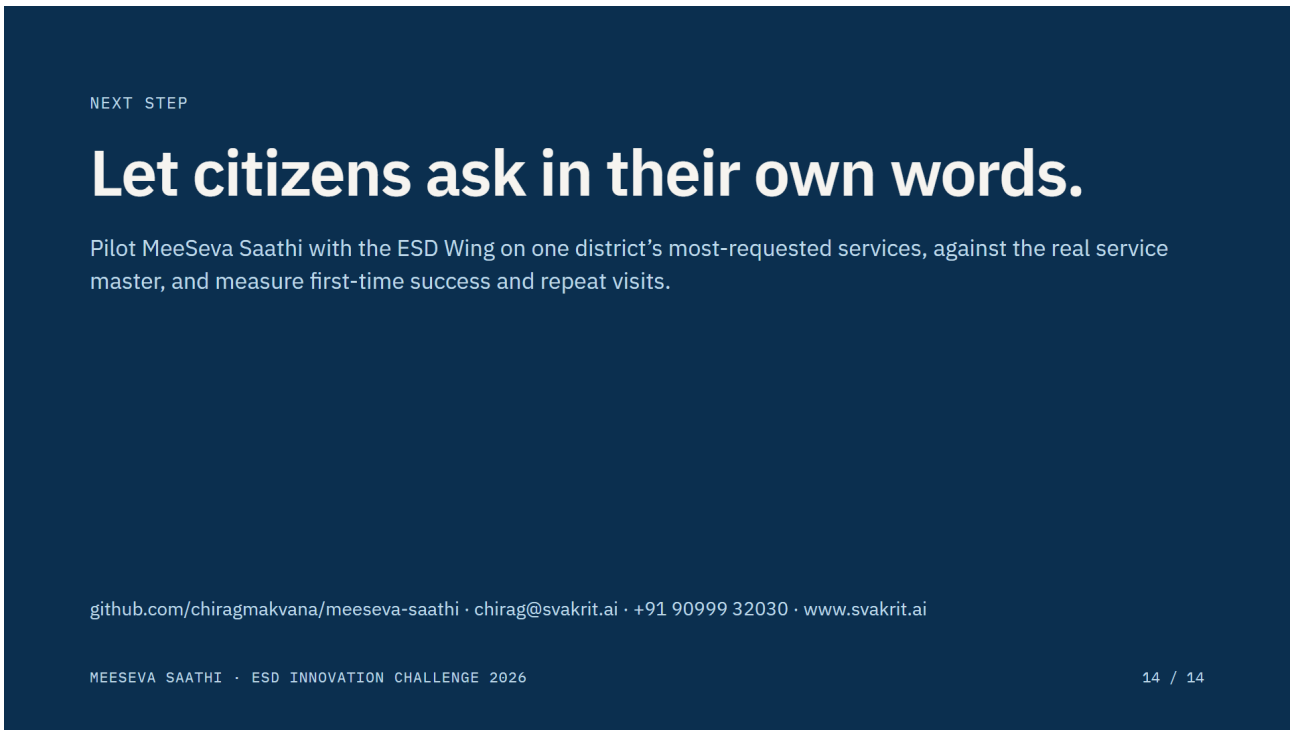

Slide 13 of 14 · Team SvaKrit AI

Bansi · about 29 s · starts near 6:26

On screen: Two cards: Chirag and Bansi, with what each built.

Bansi:

We are a team of two. Chirag did the research, the AI engine, the backend, security and the database. I did the citizen experience, accessibility, the application flow, the officials' dashboard and testing. SvaKrit AI is a Hyderabad startup, DPIIT-recognised and a member of NVIDIA Inception, Microsoft for Startups and AWS Activate.

Slide 14 of 14 · Let citizens ask in their own words

Bansi then Chirag · about 22 s · starts near 6:55

On screen: The ask (a pilot with the ESD Wing) and contact details.

Bansi:

Our ask is a pilot with the ESD Wing on one district's most requested services, against the real service master, measuring first-time success and repeat visits.

Chirag:

The code, research and tests are open at github dot com slash chiragmakvana slash meeseva-saathi. Thank you.
